Corn, Soybean and Wheat: A Review and What to Consider

2018 NC Soybean Official Variety Testing Results

2018 NE Ag Expo Soybean Variety Trials Yield Data

Best Wishes for a Happy Holiday and a Prosperous 2019!!

2018 was a challenge to say the least and probably as a whole it was just an average year in terms of yield. This is one of those years that you just want to pay out, remember those things that you can change or improve on in the future and forget the rest. It has truly been a pleasure to work with you all in 2018 and I look forward to working with you in 2019. hope that you all have had a HAPPY HOLIDAY AND WISH YOU A PROSPEROUS 2019.

With the extra demands put on producers to stay profitable because of higher input costs and a potentially volatile grain market, it is necessary to be armed with the information and tools to stay profitable. The questions that we must ask ourselves are three-fold. First, what can I do **different or better to** improve my profits and to make my farming operation run smoother. Second, what are the challenges that I will be faced with this coming year that I need to take in consideration or start addressing now. Third, am I doing the best that I can do in marketing my crops as well as managing my risk as good as I should.

To help producers get answers to these questions, the Pasquotank County Center has put together a slate of meetings that are included in this newsletter. I hope that each of you will take advantage of these information filled programs. In addition, some of these meetings have pesticide recertification credits associated with them for both the private pesticide applicator and many categories of commercial pesticide applicators. If you plan to attend any of these meetings, please call 338-3954 and register.

NC State University and North Carolina A&T State University commit themselves to positive action to secure equal opportunity regardless of race, color, national origin, religion, political beliefs, family and marital status, sex, age, veteran status, sexual identity, genetic information or disability. NC State University, N.C. A&T State University, U.S. Department of Agriculture, and local governments cooperating.

#### **30th Annual Joint Commodities Conference**

The **30th annual joint commodities conference will be on January 9 - 11, 2019** at the Sheraton Imperial Hotel in Durham. This is an excellent opportunity to learn about issues affecting the crops you grow such as corn, soybean, cotton, and wheat. For more information, you can go to <a href="http://nccommoditiesconference.com/">http://nccommoditiesconference.com/</a>.

#### **NC Soybean Festival**

Plans are underway for the NC Soybean Festival. It will be held on Tuesday, January 22<sup>nd</sup> at the K.E. White Center on the campus of ECSU. The doors will open at 5:30pm for the public to view exhibits and the program will start at 6:15pm. As usual, we will be recognizing soybean yield contest and poster contest winners of the fourth-grade students from Currituck, Camden, Pasquotank, and Perquimans. The Farmers Forum, which is a part of the NC Soybean Festival, will be held beginning at 4:00pm. This program strives to provide information beneficial to soybean producers and additional information can be found in the following article. The entertainment for the evening will be A. J. Outlaw. If you plan to attend, please contact the Pasquotank County Center at 252-338-3954.

#### Farmers' Forum: Meeting the Challenges

As a part of the NC Soybean Festival, there will be a program called the Farmers' Forum. This program will start at 4:00pm on Tuesday, January 22<sup>nd</sup> immediately prior to the beginning of the main part of the NC Soybean Festival. The farmers' forum will be made up of a speaker panel that will address the topic: "Meeting the Challenges". The speaker panel consists of two presenters. Andrew Branan, Extension Assistant Professor, Agricultural & Resource Economics, NCSU; will address Land Rental and Lease Agreements, and Liability Issues with Farming Operations and Michelle Wang, International Marketing Specialist, NC Department of Agriculture & Consumer Services will be sharing international marketing opportunities for NC soybean. There will be an opportunity for those attending to get answers to their questions. We hope that you make plans to attend this informative program.

#### **Auxin Label Changes**

Changes were made to the labels for dicamba-containing products labeled for over the top use in cotton and soybean. The most notable change includes the following:

Only certified applicators may apply dicamba over the top (those working under the supervision of a certified applicator may no longer make applications).

With this change, two things will be required. First, if the person operating the sprayer does not have a private (farmer) pesticide applicator license, then that person will have to get one to legally apply dicamba over the top. Secondly, after getting a pesticide license, the

applicator must also attend the auxin stewardship training discussed below. To recap, to legally apply dicamba over the top you must first get a pesticide license followed by the auxin stewardship training.

For those interested in receiving a pesticide licenses we will have a review session for the pesticide-licensing exam on Friday, January 18, 2019 at the Pasquotank County Center from 8:30am to 10:30am with a break from 10:30am to 11:00am followed by testing starting at 11:00am. There is a fee of \$10 for taking the test so come prepared to pay.

The next part of this process requires the licensed applicator also take the auxin stewardship training. A slate of auxin stewardship trainings located across the state will be conducted in the coming months. There will be two in northeast North Carolina. For Camden, Currituck, and Perquimans counties, it will be on Tuesday, February 26 at 11:00am at the Currituck Co. Ext. Center, 120 Community Way, Barco, NC. The other one for Chowan, Gates, and Perquimans will be on Tuesday, February 26 at 3:00pm at Leon Nixon's Catering, 749 Virginia Rd., Edenton, NC.

Labels for 2,4-D choline-containing products (Enlist One and Enlist Duo) do NOT require an applicator be certified to apply these products over the top. However, like in years past, the NC 24(c) label that requires all applicators to take the auxin stewardship training to legally apply 2,4-D choline over the top remains in effect.

Among the auxin stewardship trainings offered, there are a series of trainings offered in Raleigh mid-March through early-May, 2019. These training will serve to catch any folks who were unable to attend an earlier training in their area. Also, on April 10<sup>th</sup> at noon in Raleigh, growers/applicators will have the opportunity to receive the training in Spanish from Dr. Ramon Leon.

For additional information on this topic including the other label changes, you can go to the following link:

https://cotton.ces.ncsu.edu/2018/12/2019-schedule-for-auxin-stewardship-training/ If you have questions, please contact the Pasquotank Extension Center (252-338-3954).

#### **Farmworkers Worker Protection Standard Training**

One change made to worker protection standards is the requirement for workers (not including family members) to comply with worker protection standards training for chemical handlers (involved with the application of the pesticide). Another change is workers (others that work on the farm not involving pesticides) must obtain training prior to working on the farm as well as the training required annually for both. This requirement is something that growers have the responsibility to make certain their workers have (unless they already have had it in the current year) and if they do not have it, to provide it. In addition, the growers must have documentation that each worker has had the training. This is something that the NCDA&CS Pesticide Inspectors will check for among other things.

To help growers to fulfill this requirement, the Pasquotank County Center will be providing the training on Friday, February 15<sup>th</sup>, from 1:30pm to 2:30pm. Please call our office to make reservations for your workers to attend. When they complete the training, we will provide the growers with a document that shows who has received the training.

# Pasquotank-Camden-Currituck-Perquimans-Chowan USDA-FSA Crop Report Deadlines

Failure to meet deadlines in 2019 for crop reporting will result in late fees being applied. If you have questions, contact your local USDA- Farm Service Agency office at 338-1070 extension 2 or 426-5802 extension 2.

Crop Reporting Deadlines, by 4:30PM on the days listed here:

January 15<sup>th</sup> – wheat and all fall seeded grain crops
May 15<sup>th</sup> – spring cabbage and potatoes
July 15<sup>th</sup> – corn, soybeans, cotton, peanuts, grain sorghum and all other crops
September 15<sup>th</sup> – fall cabbage

## 2019 Testing and Pesticide School for Commercial and Private Pesticide Applicator License

The Pasquotank County Center is hosting two testings for people desiring to obtain a commercial pesticide or private (farmer) pesticide license. The first will be on Wednesday, March 13, 2019, and the second on Wednesday, November 13, 2019. The testing will take place at the Pasquotank County Center located at 1209 McPherson St, Elizabeth City and will begin at 1:00pm. Anyone coming for the testing should bring a picture ID and a calculator. Also, if you are taking the test for a government job you should also bring the address for your place of employment since it will be needed when you sign up to take the test. A review session in preparation for the testing will be held on Friday, March 8<sup>th</sup>, and Friday November 8<sup>th</sup>, respectively with both of them being from 9:00am – 11:00am at the Pasquotank County Center. If you plan to attend any of these, please call the Pasquotank Extension Center at 252-338-3954.

Although the date and time has not been determined, there are plans to have a pesticide school at the Pasquotank Extension Center in late summer/early fall. Watch for notices in the near future.

#### Corn, Soybean and Wheat: A Review and What to Consider

2018 ranged from some poor, mostly good to a few excellent yields for corn, soybean, and wheat. It is some of those challenges of 2018 and anticipation of potential challenges for 2019 that I would like to share with you.

#### Wheat

The 2017-2018 wheat crop was reasonably good considering the weather we had for much of the growing season. It had its challenges from basically planting through most of the growing season. We had next to no problem with scab this year (aka fusarium head blight), but is something we need to keep on the radar. One thing that I use to monitor the conditions and potential problems with this disease is the Penn State Fusarium Head Blight Prediction Center found at the following URL: <a href="http://www.wheatscab.psu.edu/">http://www.wheatscab.psu.edu/</a>.

Other things to consider with this crop are as follows:

- Take advantage of favorable weather to do things needed by the crop such as nitrogen management and timely applications of herbicides (don't let annual ryegrass get the best of you and watch out for the occasional field that gets heavy infestations of annual bluegrass (aka wintergrass). The postemergence herbicides such as Osprey and Axial work best when ryegrass is not too big. Read label on size and number of tillers of the weedy grasses.
- Check tiller numbers in January to get an indication about whether a timely split application is needed. Observe your crop in helping you about managing it.
- Specifically watch for pest such as insects and diseases as well as to take action at the appropriate time.
- Our higher end yields (not our highest) are running in the 80's and 90 plus bushel per acre yield and to break that barrier there are two things I feel need to be considered. First thing is drainage. I know with the current grain prices, we can not afford to do much/to no land shaping or drainage, but one thing we can do is keep the majority of our acreage on our better drained soils. Second, is our attention to fertility, which includes a refinement of nitrogen application rate and placement as well as closer attention to micronutrients.

#### Corn

With the adverse growing season, we have had this year, I was not expecting a good corn crop. After talking with growers once the crop was in, I had a number of growers say that their crop did better than they were expecting. At best, it was just an average year. There were also issues arising this year such as barren stalks even with some of our high yielding varieties. Some spots in the area had problems with stinkbugs. To help provide what we currently know about stinkbugs, Dr. Dominic Reisig will be conducting a meeting this winter as well as Dr. Heiniger will be sharing his insight as to what will be the best strategy to get maximum profitable yields.

With all that is going on in the grain markets such as tariffs, and negotiations on trade agreements, no one really knows what the future holds in terms of grain prices. The US corn and soybean crop for 2018 is not going to help with the prospects for higher prices so we must hope that someone in the world needs a lot of both. The main thing I would say is to look at your cost of production for soybean and corn as well as your yield potential for each and then decide what you think would be your best mix of crop acreages for 2019. A workshop is

planned for this winter where growers can learn about crop budgets as well as get information on grain market outlook for 2019.

#### Soybean

The 2018 soybean crop was challenging and the biggest issue with the early planted early maturing soybean (maturity group 4's, but have heard of it with other maturities in the region) was them staying green and not shedding leaves. This problem has researchers and industry people scratching their heads and you will be hearing more about it in our soybean meeting. Stinkbugs was also an issue this year and growers had questions about what they should do.

So, what can we take from this crop in preparation for the 2019 crop.

- From what I am seeing, growers are developing strategies to get higher soybean yields.
   Continue on that quest for improvement.
- The issue of plants staying green and not dropping its leaves so that it is delaying harvest with early planted early maturing soybeans is an issue not to be ignored and many people are looking at what should be done in the future to avoid it. Stay tune for more information on this topic.
- Having recognized the issue of plants staying green for certain situations (not certain we know everything about it), we still had some excellent yields with the group 3's this year. I would not recommend planting more than 10 15% of my soybean acreage to an early maturing variety. One thing that growers may look at with the group 3's is earlier planting dates on productive well drained soils at earlier planting dates in locations with the least likelihood of a late-spring frost and/or freeze. Deciding how early to go for an early planting date is going to be critical.

#### 2018 NC Soybean Official Variety Testing Results

The 2018 NC Soybean Official Variety Test results are available at this time. Although the results are no longer published as a hardcopy green book, it can be obtained online at <a href="http://www.ncovt.com/">http://www.ncovt.com/</a>. Pasquotank County had a soybean OVT with Charles Gray and Son's and their assistance is greatly appreciated.

#### 2018 NE Ag Expo Soybean Variety Trials Yield Data

Soybean variety trials were coordinated and conducted by the Extension Centers of Camden, Currituck, Chowan, Pasquotank and Perquimans counties. NC Spuds assisted with this year's trial in Pasquotank County and we do appreciate their hard work. Below is the yield data from these sites. Also, it can be found online at <a href="http://www.ncneagexpo.com/soybean-variety-trials">http://www.ncneagexpo.com/soybean-variety-trials</a>. Hopefully, this information will assist you in selecting varieties that you will plant in 2019.
